RESEARCH STATEMENT

My current research interests lie at the intersection of Human-Computer Interaction (HCI) and Artificial Intelligence (AI). As a postdoctoral scientist, I design, develop, explore, evaluate, and apply advancements in intelligent user interface frameworks for AI applications. My current work focuses on Conversational AI, Model Steerability, and Human-AI Agent interactions. I leverage my background in HCI to enhance the data annotation processes for machine learning model development.

I earned my Ph.D. from Purdue University's C Design Lab, where I specialized in designing, developing, and evaluating novel 3D interfaces and interaction techniques, combining them with ML models to progress Extended Reality (XR) applications. I am deeply passionate about the potential of AI to transform human interactions with technology and its implications for our future. My aim is to integrate my expertise in HCI with my current research in AI to drive innovation and enrich everyday life.

My research has been published at premier venues for HCI research, including ACM CHI, CSCW, UIST, Ubicomp, DIS, and ISMAR. Recently, my ongoing efforts have been geared more toward AI-NLP venues such as ICLR, EMNLP, and HCOMP, reflective of my commitment to interdisciplinary research at the forefront of HCI and AI.
